

Factsheet

# Well Engineering

Senergy Wells Drilling Engineering and Production Technology expertise provides an engineering resource and focal point for the planning and option screening for your projects. We help evaluate and select the best options for your well program, from single exploration wells to multi- well field development.

We have experience in all types of wells in all areas of the world, and can support the technical aspects of your project- providing expertise, timely peer reviews and support for well engineering design and preparation.

We can support from conceptual design through to final detailed engineering.

Our capability extends through to the most technically challenging wells, located in some of the remotest and harshest environments globally.

We provide you with access to a broad range of skills and experience which can provide peer support as required, but without the full-time expense.

We add value to your projects by thorough offset well analysis, design, engineering, lessons learned reviews, accurate cost estimating and management of change.
