

Factsheet

Your trusted third party Well Operator

Supplement your capability with only the best well engineering expertise.

We manage well project delivery with a full life cycle approach, covering all aspects of well design, construction and abandonment, helping minimise down time, and capital and operational expenditure.

With technical excellence and strength in depth governed by our robust and well established processes, we help evaluate and select the best options for well programs, from single exploration wells to multi-well field developments.

With years of project experience building lessons globally we apply this to your projects to minimise down time, reduce risk and costs and increase confidence to deliver projects on time and in budget.

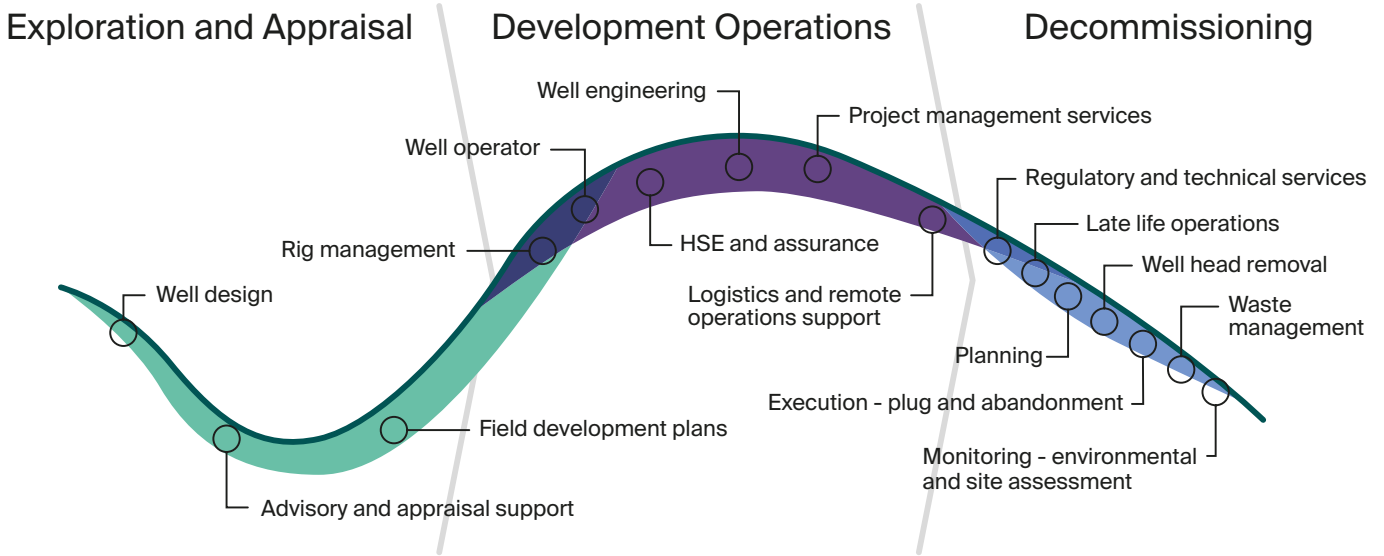

We're a recognised well operator in the most rigorous regulatory environment and have diverse global experience including as new country start-ups and support of non conventional flagship projects.

Our services include:

- Well design evaluation
- Advise on development of cost effective wells
- Oversee and prepare field development plans
- Facilitate access to rig-slots while passing on the financial benefits of a longer term rig contract
- Enable you to outsource your entire well operations and rig management requirements
- Help source and manage available drilling rigs equipment and services, which allows 'first time' operators to outsource their entire drilling and rig management needs to us.

Well life cycle

Senergy Wells; providing specialist services across the entire well life cycle.
